
Under our Skin

by Tom Brooks and Roberto Vitalini

After a difficult start, the new millennium gets under way when a program to identify and inoculate the entire world population is undertaken by the United Nations with the surprising support of the US. A massive project with far-reaching benefits for mankind, the program introduces an edible rfid capsule that allows rapid identification and medical history retrieval as well as insuring democratic elections, equal distribution of resources and aid, improved security and efficiency in transportation and schooling and much more

A move to upgrade and privatize the program is being tested in the US by a consortium of pharmaceutical and consumer goods companies. The trial, which offers free cosmetic surgery to volunteers in exchange for accepting the new implants, seems to be flawless until...
